

Activity-Based Learning, grounded in the idea that "Play is the highest form of research," offers a dynamic approach to early childhood education. At NPS Kengeri Junior Wing, the incorporation of Activity-Based Learning (ABL) is a fundamental aspect of the curriculum for kindergarten students to enhance learning through hands-on activities, like Puzzle boards, Matching the first sound with pictures, Moveable alphabets to practice segmenting & blending of words, Pictures with words banks, Stringing beads, Bead bars, cards & counters and STEM activities, are strategically used to visualize the concept and support learning in Language, Math, and General Knowledge (GK). By incorporating a variety of materials and interactive experiences, ABL enhances students' learning experiences, fosters practical knowledge, and develops critical thinking skills that align with the natural curiosity and enthusiasm of young learners.

Our school well trained faculties have prepared many handmade learning materials for better understanding of the concept taught in the classroom which leads to foster applying skills.

Thus activity-based learning help children reinforce the learned concepts in an engaging and interactive way exploring new concepts and foster self-learning.
