

The Montessori method is an innovative approach to education that fosters a child's natural curiosity and love of learning. Based on the principles developed by Dr. Maria Montessori, this method emphasizes hands-on, self-directed learning within a prepared environment. By encouraging exploration and respecting each child's individual pace, Montessori education nurtures independence, critical thinking, and a lifelong passion for knowledge. Our school integrates these principles to create a dynamic and supportive learning environment where each student can thrive and reach their full potential.

At our school, we celebrate Dr. Maria Montessori's birthday with a day filled with inspiration and learning. The event includes special activities that highlight her educational philosophy, such as hands-on Montessori materials and collaborative projects.

Students and teachers come together to reflect on her contributions to education, sharing stories and exploring how her principles shape our learning environment.

It's a joyful occasion that honors her legacy and encourages us to embrace curiosity and independence in our own educational journeys.
